PERSONAL FASHION, THOUGHTFULLY CURATED

Fardin Hafiz
Group 10

Problem

- Online Shopping takes a lot of time and effort sifting through different websites.
- Finding exactly what you are looking for is based on what websites your search engine shows you.
- For more specific searches it is harder to find exactly what you are looking for.
- Online shopping doesn't offer the same personalized touch as in person.

Solution

- An AI based shopping assistant that learns from the user.
- Help the user determine intention and make it easier to find exactly what they are looking for.
- Different then standard search engines as they only search with input text, but this gets personalized with a person over time.
- Standard search engine also only show popular brands or sponsored brands while this allows for smaller reputable brands to be shown if it matches
- Helps users by find clothes exactly to their wishes and retailers by lowering return rate of clothes
- Offers a ‘For you’ section that recommends clothes based on specific taste of the user

Tech Stack

- User Profile-
  - Allows the user to select their personal preferences to better allow the algorithm to understand
  - Like/Dislike Feedback loop allows the user to like or dislike the recommendations so the model can learn their taste
  - Photo Upload using PILLOW package - Allows the user to upload a picture and the algorithm gains insights
- Search Function -
  - NLP Model - Implements a Semantic BERT model to understand the meaning of the user
  - Manual Scoring mechanism that shows results based on the users preferences
  - Cosine Similarity to show the results of the search
- For You Section-
  - XGBoost Machine Learning model- Uses a Machine Learning model based on all of the user feedback and user preferences to show clothes the user might like
  - Falls back to the manual scoring methodology if the XGBoost model is not fully trained
- Backend -
  - SQLite - Used to store user data to make sure each person's profile data is stored and they can come back to the application at pick up where they left off
  - FastAPI- Handles all the models and connects the frontend and the backend
- Frontend-
  - React - Allows for a visually appealing and reactive interface for the backend

A PERSONAL ALGORITHM-BASED FASHION CURATOR
Get the attention of a personal fashion curator, all online and from the comfort of your home.
Curate learns from your saved preferences, your uploaded inspiration, and the results you choose to like or dislike.
Upload pictures as inspiration and select whether the result is something you like. The more you interact, the better the results you get.
Start with Profile

How Curate works
Build a personal style profile with preferred and avoided attributes.
Upload inspiration images so the system can learn visual signals from your taste.
Search naturally using phrases like black hoodie, clean streetwear, or smart casual.
Use like and dislike feedback so recommendations improve over time.
